

## LIST OF FIGURES

Fig. 2.1 Components of a syllable “tak” .....	7
Fig. 2.2 Listega Architecture [5].....	9
Fig. 2.3 Latin square for camouflaging 4-bit slices in Listega [5].....	11
Fig. 3.1 Two-bit Assignment of First 1 Syllable Patterns.....	15
Fig. 3.2 Complete Architecture of List Steganography Based on Syllable Patterns .....	16
Fig. 3.3 Syllabification process.....	17
Fig. 3.4 Character frequency distribution analysis .....	18
Fig. 3.5 Method of character frequency distribution analysis .....	19
Fig. 3.6 Syllable Pattern Frequency Distribution Analysis.....	20
Fig. 3.7 The method to count the syllable patterns.....	21
Fig. 3.8 Insertion of CHAR column in the employee birthday list .....	22
Fig. 3.9 Main Process of the architecture of List Steganography Based on Syllable Patterns .....	23
Fig. 3.10 Main algorithm of message partitioning.....	25
Fig. 3.11 Detailed Algorithm of Step 3 of Message Partitioning .....	26
Fig. 3.12 Embedding of Message “TEMUI PAK TAMIM” .....	27
Fig. 3.13 Method of Extracting Message .....	28
Fig. 3.14 Distribution of Employees Having Birthday in a Particular Month.....	32
Fig. 4.1(a) Mapping using index 2 of latin square (b) List-cover of original Listega generated using employee birthday list to embed the message “STOP” .....	34
Fig. 4.2(a) Mapping using index 1 of latin square (b) List-cover of original Listega generated using employee birthday list to embed the message “GET HIM” .....	35
Fig. 4.3(a) Character – Syllable Mapping (b) List-cover of List Steganography Based on Syllable Patterns to embed the message “STOP” .....	36
Fig. 4.4(a) Mapping using index 1 of latin square (b) List-cover of original Listega generated using employee birthday list to embed the message “GET HIM” .....	36
Fig. 4.5 a – f Graphic of Message Chunks Needed to Embed Message in Upper Half (left-hand side) and Lower Half (right-hand side) of Character Frequency Distribution Table .....	47
Fig. 4.6 a-c Graphic of Message Chunk Needed using List-cover Grouped by Division in Alphabetical Order and Adjusted Order.....	48

Fig. 4.7 Graphic showing the maximum message length with threshold = 50%.....	50
Fig. 4.8 Average Message Chunks Needed to Embed Message 1- 8 in Various Intervals ....	52
Fig. 4.9 a – d Graphic of Message Chunks Needed to Embed Message in Indonesian (left-hand side) and English (right-hand side) .....	53
Fig. 4.10 Embedding using Different Lists .....	56
Fig. 4.11 Robustness measurement of message “KAKI” in a. various intervals and .....	57
Fig. 4.12 Robustness measurement of message “KAKI RITA” in a. various intervals and b. grouping by division .....	58
Fig. 4.13 Robustness measurement of message “KAKI RITA SAKIT” in a. various intervals and b. grouping by division .....	59
