

TERMINOLOGY

5C4C	: One of methode of knowledge management system that convert data into information and information into knowledge.
Admin	: People who are updating the data, that in this case is one of Data Analysis and Sales Sub Division.
Appplication Programming Interface (API)	: Appplication programming interface that is a set of routines, protocols, and tools for building software applications.
Attribute/Variable Data	: Tabular data that provide information that describes the object including spatial data. Data that has the task of defining of processed data (information data).
Back-End	: One of part of developing information system that more specific to the program and script or source code, which is working on the server, which runs behind the scenes, and create a web, into a dynamic and interactive.
Black Box	: Black box is a device, system or object which can be viewed in terms of its inputs and outputs (or transfer characteristics).
Bos Admin	: One of system that hase been developed by Telkom University Admission Directorate to manage register of regitrant and student candidate of Telkom University.
Browsers	: A software application for retrieving, presenting and traversing information resources on Worl Wibe Web, in this case tools for coding translates into a whole system information.

Client Site	:	Refers to operations that are performed by the client in a client–server relationship in a computer network.
Data Dictionary	:	A collection of descriptions of the data objects or items in a data model for the benefit of programmers and others who need to refer to them.
Database	:	Collection of data that is organized so that it can easily be accessed, managed, and updated.
Entity	:	Something that exists in itself, actually or potentially, concretely or abstractly, physically or not.
Expert System	:	A computer system that emulates the decision-making ability of a human expert.
Explict Knowledge	:	The knowledge that has been articulated so that more structured and can be stored, and can be transferred to anyone with ease.
Front-End	:	One of part of developing information system that more specific to the design of interface that execution on the client side.
Id	:	One of data that define the primary key that usually defeined by number.
Influence Diagram	:	Useful visual and communicative tools for displaying the main factors of a decision problem and the relationships between them.
Information Data	:	Data regsitrant or student candidate that managed by BosAdmin system and transferred to process on Knowledge Management System.
Information System	:	The combination of information technology and the activities of people who use the technology to support the operation and management, and this case design it is the main object of research.

Interface	: A shared boundary across which two separate components (human and software) of a computer system exchange information.
Knowledge Management System	: The knowledge that has been stored on the information system or technology that ease to use.
Latitude and Longitude	: Angles that uniquely define points on a sphere that usually define coordinate in the map.
Layer	: The mechanism used to display geographic datasets .
NIK/NIP	: The unique number or primary key that each person is different yet.
Nonfunctional Requirement	: Requirement that not the purpose of research or the main function of the system, but it can help the system work well.
Objected-Oriented Programing Language	: A programming paradigm based on the concept of "objects", which are data structures that contain data, in the form of fields, often known as attributes; and code, in the form of procedures, often known as methods.
Open Source	: Any program whose source code is made available for use or modification as users or other developers see fit.
Operation System	: Software that manages computer hardware and software resources and provides common services for computer programs.
Pin	: Identification number that which indicates that the register has paid the registration SMB Telkom.
Primery Key	: Constraint uniquely identifies each record in a database table that must contain UNIQUE values.

Registrant	:	People signed up to participate on of selection of SMB Telkom.
Scenario	:	The object is the purpose for the test or do the process in a use case.
Spatial	:	The data in the form of maps in digital format that provides a description of the characteristics of a location.
Tacit Knowledge	:	Knowledge contained in the brain / mind someone accordance with the understanding, skills and experience of someone.
UI/UX	:	User Interface (UI) and User Experience (UX) that one of tools or method that help to make the interface as nonfunctional requirement.
UML	:	A general-purpose modeling language in the field of software engineering, which is designed to provide a standard way to visualize the design of a system.
Users	:	People who operate a computer program that became the main entity. In this case, Users is all of worker that become representative in each province from Marketing and Cooperation, and Planning and Selection Subdivision.
Visualize	:	General term used to describe any technology that lets corporate executives and other end users “see” data in order to help them better understand the information and put it in a business context.
Web Based	:	Software that used over the internet with a web browser.
