

## ABSTRACT

---

*Not always the process of socialization with other people directly face to face, but it can be through by social media. Today social media has become the identity of everyone. Almost all people have social media accounts, especially among agencies that have the basic technology. As if would have become a necessity when students, lecturer, and employe of university can interact with each other in social media. Interactions are created not only chatting in a chat application, also it could give like and comment with each other. Because of that, then built an Application Of Based Social Network On Android At Telkom University. This application is built with a prototype method with the aim to summarize a set of photos into an album in digital form can then be distributed to other social media and update information of campus. Features presented this application is slightly different from that of other applications of digital albums. Page to see the photos in this application already make group based on category..*

*Keywords: Application, Digital Album, Social Network, Android.*
