ABSTRACT

Bandung is a paradise for foodies (especially cake). Even the cake lovers willing to travel long distances just to buy a cake as desired. Lack of knowledge about the streets of Bandung, often make the cake lovers use google maps as driving directions. However, the lack of information contained by google maps, like not contain all the existing bakery in the city, do not load menu available at a bakery, cake lovers are often made to feel disappointed because it ran out cake desirable caused by too long on the trip. Of these problems the author establish a web-based application that provides information on menus available, may indicate the direction of the location of the bakery, and can make bookings as well as payments for the desired cake. Applications built using the Software Development Life cicle (SDLC) waterfall, using the programming language PHP. This application can display information on menu available at a bakery, bakery well as information regarding the location of a direction and the fastest route, may make a reservation, as well as make payments using the e-payment Doku Wallet. With this application may be an alternative for cake lovers to obtain the desired information, as well as an order not to run out.
