

## ABSTRACT

---

*Criminal Researce (RESKRIM) is one part of police duty that handlethecriminal. Vehicle loosing is an incident that caused noxiousness for person. Every criminal incident related with vehicle loosing need fast respond from police office. By that, police officer respond is needed in an area for help and serve people on complaint, report and security purpose. But policeman have problem if all report documents is loosing or the room is full. This Final Project will developpe an application which assist policeman for handling vehicle loosing data will be operated by BAP's officer. This application namedApplication Of Data Collection Of Missing Vehicles(APPK) based web. Before developing this application, perviously need survey to make sure the requirement and data result is similar with police. The requirement for developing this application is the programming language using PHP framework, software development life cycle is RUP(Rational Unified Process) because it is support for programming language using framework.*

*Keywords: RESKRIM, PHP, MySQL, SMS Broadcast*
