

ABSTRACT

SMAN 3 Madiun is a well-known best high school in Madiun, so it surely effects many students to get into there every year. However, unfortunately there are so many systems which is done manually there. Based on the survey conducted early, the activity such as student evaluation and subject distribution are still manually done. Those two systems should be computed in order to get more efficient result.

To overcome the problem, then in this final project, the application web-based is made to organize the student evaluation system and subject distribution as the applicable curriculum. The application has many features, those are handling the student evaluation input, monitoring score, uploading the subject's material, seeing the score for student, and downloading the subject's material.

From the subjective test, it is obtained score 4.14. It means, the performance of the website application for student evaluation and subject distribution is valued 'good'. Therefore, it can be said that as the presence of the website, student evaluation system and the subject distribution are easier and more efficient.
