

ABSTRACT

PT. Dayu Putrindo is a developer company which provides house selling service. PT. Dayu Putrindo demands a selling house application which makes it easier for the potential buyers, as well as for companies, to gain access to the house selling. It is considered to be necessary since there have been difficulties in the house selling record, the cost calculation, and the buyers and marketing archives. This shows how information technology has influenced the work of a company. The software development is using structured models of Data Flow Diagram (DFD), Entity Relationship Diagram (ERD), Database and Process Specification. The implementation of the application is web-based and using PHP Programming language and MySQL database. The assessment resulted in the expected outcome.
