

ABSTRACT

Circulation and abuse of narcotics and illegal drugs is now an issue of concern. Increasing the number of users over the years has always significant. Narcotics and drugs have also been entered into all the institutions and circles. With the large number of drug users in West Java, required the drug rehabilitation centers for victims of drug abuse. However, based on data from BNN West Java, 850 thousand people were victims of drug abuse, until 4th week of July 2015, 2.232 people were rehabilitated. This is attributable to the lack of rehabilitation centers exist.

The assumption that the recovery process is done only with the medical process leads to a lack of attention to the rehabilitation center providers of interior room. This fact is commonly found in Indonesia, where there are still few who think about the importance of drafting the space and attention to psychological comfort of patients as supporting the healing process. If it exist, its on minimum quantity and can only be found in places - a private place that has the funds and mid - upwards.

The government rehabilitation center houses and public rehabilitation center in Bandung, prioritizes the functional side only. The conditions of the rehabilitation center is not adequate to accommodate the psychic optimal occupant, due to limited funding and the lack of knowledge about the importance of various positive stimulus in the environment of care.

Keywords: *rehabilitation center, room concept*
