

ABSTRACT

Sitting for passenger priority is the means provided by the Commuter Line for passengers a priority such as the elderly, pregnant and mothers bring babies and also the disability people. Priority in seating provide a means to provide security and comfort for passengers the priority at the time of the trip, but the density of passengers when certain times create a function of priority seating means less efficient because passengers have to stand up and thrust. On the other hand, there is not a priority passenger undertook to use means the priority seating.

By using descriptive research methods, namely by doing observation and field research directly against the issue or the problem is occurring the phenomena and analysis of various data obtained good field data as well as data of literature to be retrieved a workaround in the form of designing effective and efficient products in the form of a means for passengers to sit in the Commuter train Line priority.
