

LIST OF TABLES

| | |
|---|-----|
| 1.1 Binary Data Representation in a single cell of a QR Code symbol. | 4 |
| 2.1 Mode indicators | 10 |
| 2.2 Error correction levels. [1] | 10 |
| 2.3 Example of data blocks in QR Code symbol 5H | 11 |
| 2.4 Mask pattern generation conditions. [1] | 12 |
| 2.5 Scoring of masking results. [1] | 13 |
| 2.6 DRBG Mechanism Summary | 16 |
| 3.1 Five Android QR Code Reader Applications | 19 |
| 3.2 First Preliminary Experiment result. Five Android readers decoding a series of QR Code symbol. | 20 |
| 3.3 Second Preliminary Experiment Result. | 22 |
| 3.4 Third Preliminary Experiment Result. | 23 |
| 4.2 Compatibility Success Rate | 56 |
| A.1 Offline Method Result in Measuring Data capacity. | 72 |
| A.2 Decoded Symbol from Online Method with 13cm Scanning Distance. | 81 |
| A.3 Decoded Symbol from Online Method with 16cm Scanning Distance. | 88 |
| B.1 Result from decoding four types of symbol version 15L with 7% cropped area, Blob and scratch pattern. | 96 |
| B.2 Result from decoding four types of symbol version 15M with 13% cropped area, Blob and scratch error pattern. | 97 |
| B.3 Result from decoding four types of symbol version 15Q with 20% cropped area and scratch error pattern. | 98 |
| B.4 Result from decoding four types of symbol version 15Q with blob error pattern. | 99 |
| B.5 Result from decoding four types of symbol version 15H with 24% cropped area. | 100 |
| B.6 Result from decoding four types of symbol version 15H with scratch error pattern. | 101 |
| B.7 Result from decoding four types of symbol version 15H with blob error pattern. | 102 |
| C.1 3x3 Sub Cells Symbol Size Comparison | 104 |
| C.2 3x3 Sub Cells in Compatible Mode Symbol Size Comparison | 106 |
| C.3 3x3 Sub Cells in Extended Mode Symbol Size Comparison | 107 |
