

List of Figures

2.1	Noun graph at WordNet 3.0 [1]. Every node represents a synset, the line represents the semantic relation	8
2.2	Visualization of the Ontology of Quranic Concept graph. Each node represents a unique concept in the Quran [2]	12
3.1	Data analysis work flow to check WordNet coverage over Quran English Translation by The Saheeh International	15
3.2	WordNet accomodability over all noun tokens in Quran English translation data set by the Saheeh International	17
3.3	The flowchart diagram of process to gather gold standard	18
3.4	WordNet accomodability of concepts in gold standard data set	19
3.5	The general work flow of the system testing	26
4.1	Strategy 2 α and β calibration and the result of its Spearman's correlation surface plot	30
4.2	Strategy 2 α and β calibration and the result of its Pearson's correlation surface plot	31
4.3	α calibration in strategy 3 and its Pearson's correlation	32
4.4	α and β calibration and the result of its Spearman's correlation surface plot	32
4.5	α and β calibration and the result of its Pearson's correlation surface plot	33
4.6	β calibration in strategy 5 and its Pearson's correlation	34
4.7	Gold standard and system's output plot	36
