ABSTRACT

The purpose of making this web based application on UD VEKSIA is to help the administration to see order specifications are complete and clear, so that it can calculate the material needs quickly. Also this application will result in financial reports and it can help customers to monitor the progress of their orders by way of inputting the unique code and then the progress will appear, customers can monitor the progress anytime and anywhere.

This final project is to build an online ordering and monitoring system. System design on UD VEKSIA website was developed using some software that is Notepad++, Xampp Server which is a combination of the Apache Web Server, PHP and MySQL and in making this application using the Waterfall method. With the making of this application, costumers can make an ordering and monitoring online.
