

ABSTRACT

School of nature is a school with nature-basic, that the students learn from their experiences that they get by knowledge from nature. In Indonesia, Sekolah Alam has been built in green area with farming area, husbandry area, and agriculture area, that be created naturally or artificially. Lampung School of Nature is one of school that located in Way Hui Village, South Lampung. The Village has important roles as agriculture, farming, and husbandry area for people so this place is suitable to become the location for building the school. The building of the school is created by nature-concept, that the shape and the structure of building don't damage the nature, exactly become part of nature itself. However in this school, classroom and other rooms haven't been designed specially because the students spend more times in outdoor. Although the students spend more times in outdoor, interior of the rooms in school is needed to be designed, especially if it is considered from pleasure and safety aspects, the rooms like classrooms, library, IT Laboratorium, and Science Laboratorium. Refers to building's concept and function, eco-design is a knowledge that suitable for designing the interior in the school. With eco-design, the students also can get addition knowledge about the importance of nature existence, appropriated with the purpose of learning models that be held in the school.

Keywords: *interior, school of nature, eco-design*
