

Abstract

Information Systems (IS) and Information Technology (IT) at this time is a basic requirement to support the course of business processes within an organization, an institution or an enterprise both the giver services or purchase. RS Kusuma Ungaran is a growing health institutions and is developing its business processes. In the development of the business process, RS Kusuma Ungaran need information systems that can accommodate all future business processes at Kusuma Ungaran Hospital. So we need a Information Systems Strategic Planning to be able to build information systems that fit the needs and business processes of Kusuma Ungaran hospital, and also to be able to compete with other hospitals that have implemented information systems to improve its service. At Kusuma Ungaran Hospital has been using an information system that is SIMRS (Sistem Informasi Manajemen Rumah Sakit), which is still not enough to be able to accommodate all the existing business processes in Kusuma Ungaran Hospital and which will be developed further. Information System Strategic Planning that will be discussed is the information system strategic planning with a method created by Anita Cassidy in her book, A Practical Guide to Information Systems Strategic Planning (Second Edition, 2006) by applying the four phases in this book are visioning, analysis, direction and recommendation. This study resulted in a strategic planning document called Information Systems Strategic Planning document or ISSP documents. Information Systems Strategic Planning become a factor of information system development in the Kusuma Ungaran hospital.
