

ABSTRACT

The elementary school is a stage in education to get a higher level. Parents have a very important role in children's education at school, but the teachers have to replace their position as long as the children or students get a lesson at school. So communication is very important between teachers and parents to know more their children's building and their achievement. The lack of communication is caused by their limited time. This final project was made by using the method of prototype model to allow the user to have a basic description about the program and also by doing a research based on a working model. This application of system information is able for doing communication through online message and also able to manage the data of teacher, parents, students, student's grade and school information.
