

ABSTRACT

Vania Skincare is a business that serves product sales and beauty consulting. Consumers wishing to purchase products and consultations should come to the clinic directly for a limited time in accordance with the time and schedule of the clinic consultation. Related to transaction data, the reports is done manually that is using a book that allows the book is damaged, lost, duplicate data, as well as storage documents that require storage such as shelves or cabinets.

Based on the above problems, then made a Beauty Product Sales Application and web-based consultation that features online product ordering, consulting, product data management, transaction data and product sales reports. These features can be accessed by several users: Consumer, Clerk, Doctor and Manager. This application is created by using Software Development Life Cycle Waterfall method, PHP programming language and MySQL database.

Based on the results of User Acceptance Testing testing, 100% of users involved in this application say that this application is good and is in accordance with the user needs and they understand the concept of the system created. Therefore it can be concluded that the application can be accessed online by consumers, doctors and clinic employees. For consumers this app can help in ordering products and consulting beauty without having to come to the clinic. For physicians this application can help in terms of answering consultations online both on schedule and outside of the clinic consultation schedule. For employees, this application can help in terms of product sales and make sales reports of products.
