

ABSTRACT

PROTEKSI PRADANA is one of the insurance brokerage company that was established in 2011, has its head office in Jakarta and branch office on Jl. Kebon Waru Selatan No 8, Batununggal Bandung. At this time, the process takes place in the PRADANA PROTECTION still manually where the officer should survey to the client place for the bidding process, placement and delivery of information on the insurance premium bill. Based on the description above, the authors make a web-based application for the supply and acceptance of commission premium insurance services using waterfall working methods. The waterfall method provides an ordered approach, ranging from needs analysis, system design, program code writing, program testing and maintenance. This final project will produce a web-based application for bidding and receiving insurance committee services in PROTECTION PRADANA.
