

ABSTRACT

Co-working Space is the present office concept, common workers or freelancers. Relaxing and comfortable impression evoked by the concept of creating a Co-working Space highly developed in various cities of the world, even no exception of Bandung City. We now know the field of multimedia professions are group by many freelancers, thus designing a Co-working Space as medium of multimedia professions field facilities in the city of Bandung where the object was appointed for this task. One of the purposes of the establishment of the Co-working Space is as a means to mutually discuss and establish the relationship between user Co-working Space. Unfortunately based on the result of observation, that goal has not been realized yet. Caused by facilities Co-working Space is not support, so the communication between the user's of Co-working doesn't maximally interlaced that implicates to furniture design, space, and the buildings designed for a work space. Therefore, the design of this Co-working Space aims to create a place that can be used in the community especially in the area of multimedia to work efficiently, creatively, and socialize so that the creation of Co-working Space can be realized maximally.

Keywords: Co-working Space, Communications, Multimedia, Bandung.
