

ABSTRACT

The efforts to upgrade facilities to fulfill passenger comfort, referring to one of PT KAI's mission which is innovation by cultivating new ideas and continuous improvement in keeping with times. The interior redesign at the railway station follows the needs of the facility as the demands of the functional development of the waiting place become a place of socialization and the increasing of economy-class train services that demand innovation and continuous improvement. The function of the station as a place for passenger to wait and transit has another function to be a place to socialize between passengers. Facilities at the station include waiting room, customer service, ticket counter, e-kiosk, check in counter, boarding area, sign system, station headroom, administration, shops, restaurants, and prayer room. This design aims to facilitate human movement and socializing activities among passengers at Kiaracandong railway station. The interior redesign of Kiaracandong Station focus on four main issues: waiting area, circulation, sign system and difable. The atmosphere expected to be compatible for social interaction between passengers, especially general information area because there is a lot of interaction between visitors by applying the form of space that emphasizes the function and usability of space and material maintenance and adjust the development for an increasingly growing economic railway facility.
