

ABSTRACT

In TB Inti Jaya, its transaction manually using a memorandum of the transaction, then the data of the Memorandum of the transactions on copied into the book to record expenditure and revenue, it allows errors in recording and spend time to do it. The company on the trade almost every day, this can lead to a transaction, so that pengeluarn and purchases will not be recorded. If the few transactions that occur is not recorded it will lead to mistakes in doing the books. The company also has a record of accounting as journals and income, which is useful for determining profit or loss in the company's earnings. The web can facilitate the calculation for income. It was started from mencatatatan in sales transactions, which results in the journal and book great. then reduced the total expenses of such a burden on companies that produce income, using SDLC, using pemrograman Codeigniter, supported by database MySQL.
