

ABSTRACT

Cabana is an English natural noun which means a kind of tent where shelter on the rug on the seafront. Cabana in general is one type of room that is rented as a shelter or shelter .. Cabana with an interesting and unique design can be its own attraction for tourists Pari Island. Where Pari Island is the second famous island after Pari Island is quite popular with visitors with white sandy beaches and watery greenish, Pari Island became one of the attractions in the Thousand Islands. With these conditions the processing of the facility must be adjusted to the potential of tourism, air circulation, and local climate. With the existence of adequate shade facilities can be a support in enjoying the atmosphere of tourism environment Pari Island. Comfort cabana is one thing to note. This convenience is directly related to the aspect of ergonomics and its relation to the dimensions of the human body / user known as anthropometry. Implementation of ergonomics in the cabana is needed to avoid fatigue in human muscle while on the move, to reduce the risk of accidents and increase the value of the cabana itself. This aspect of ergonomics will be the benchmark of aesthetic and system aspects. This research will be studied with qualitative methodology. The research will process the existing sources and also the field observation data in the form of interviews and questionnaires.
