

ABSTRACT

Outer space (space) is a vacuum in which there is a collection of galaxies and other celestial bodies. The outer space with all its contents holds meaning so important and vast to the interests of all mankind. Especially for Indonesia, the aspect of space management (space) becomes very important considering the potential utilization of extraordinary magnitude.

Until now the existence of space museum in Indonesia is still less attention in terms of interior design so that it can interfere with the achievement of the goal of the museum itself is as a means of education and scientific tourism or edutainment interesting and educating. Basically astronomy is always associated with the future and high technology so that the concept of futuristic style can represent the Museum with a virtual technology approach where all the (visitors) can feel the experience of space.

In addition, the Museum of Space is expected to be a means of educational tourism worth visiting with facilities, comfort and interior design in the building to look more attractive and function effectively as a means of education-based tourism.
