Nowadays motif in textile grow in vary, but still it can be expanded by the application of textile techniques. The method used in this research were doing observation and literature review of shibori techniques to gain it's potential. Shibori techniques has chances and potentials to be expanded by using textile techniques. The method in shibori technique can create other elements such as tactile texture besides creating simple motifs such as jumputan, fold, and tie. By the chances of the development of shibori techniques, this research made an experiment by adopting the process of shibori techniques in textile material in order to give a new variation in shibori textile. The result of exploration in this research are sheet of fabrics with tactile texture which made its highquality product, explorative, and applicable to women's clothing product with simple design in order to optimize motifs and tactile textures resulting from shibori technique's processing.

Keywords: shibori, motifs, textures, fashion.
