

ABSTRACT

Orphanage can experience obstacles in fulfilling basic needs, health insurance, and education. There are many ways in which the institution can receive donations, such as receiving donations donated directly to social institutions or by storing donation boxes at several stores. Based on the process of obtaining the donation requires a donation or donor search system. Therefore, the author helps provide solutions to the process to make donations. And help provide solutions in providing information to the community or donors, so that the community or donors can find information about the orphanage. The app has an easy-to-use display feature, featuring multiple organs that can be easily seen by the community or donors, displaying a list of donors, making the community or donors more trustworthy to donate to the orphanage. This application is built with Java and XML programming language with MySQL database system.

Keywords: Orphanage, Donations, Android, Java, PHP.
