

Abstract

Enthusiasts of music are very many, but do not understand the basics of music. Following music lessons or studying with a music teacher is not cheap for the cost, and can take a long time and is not worth the effort spent.

Based on the above problems we have the idea to create EMUNOGU (Music Education and Song Notation) Special Application Arrangement and Music Education Notes Android-based Song Notation that can help beginners in learning music.

With the existence of several materials and quizzes that have been prepared as well as track records that function as practice tools that contain number notations that will be made by the user. Thus beginners can learn about the basics of music.

Keywords: *music, notation, EMUNOGU.*
