Abstract

Enthusiasts of music are very many, but do not understand the basics of

music. Following music lessons or studying with a music teacher is not cheap for

the cost, and can take a long time and is not worth the effort spent.

Based on the above problems we have the idea to create EMUNOGU

(Music Education and Song Notation) Special Application Arrangement and Music

Education Notes Android-based Song Notation that can help beginners in

learning music.

With the existence of several materials and quizzes that have been

prepared as well as track records that function as practice tools that contain

number notations that will be made by the user. Thus beginners can learn about

the basics of music.

Keywords: music, notation, EMUNOGU.
