Abstract

D3 Application Software Engineering Faculty of Applied Sciences at Telkom University, to be able to graduate and get a Diploma III degree, Students must be required to pass the Final Project course in the Final semester. To take a final project subject, students must fulfill the conditions stated in the D3 Application Engineering Study program. students can choose the final project title or see the availability of the final project title that has been determined by the D3 Application Engineering Engineering lecturer, however. Students can submit the final project title independently in accordance with the case studies that have been reviewed by the students themselves. Therefore we need a system that can manage and manage the entire process. Thus, the website-based finpro application is here to solve existing problems to help all the processes in the final project activity effectively and efficiently. The finpro application is built on a website platform by using the laravel framework and using the MySQL database to access the database. Finpro applications are tested using blackbox testing, Blackbox testing is testing functionality with the test results seen from the display that has been made. the purpose of this test is to find out whether the application has been running as expected or not.
