

ABSTRACT

Oktaviani, Indah. 2019. Directing Documentary Film "Living In The Ring of Fire". Thesis. Visual Communication Design Study Program. Faculty of Creative Industries. Telkom University.

Mitigation is an effort to reduce the risk of natural disasters. Including earthquake disasters that caused by active faults, and many active faults scattered in the territory of Indonesia, where it becomes a threat to the people who live around it, one of which is the Lembang fault which still shows its activity. The lack of comprehensive mitigation information to the local community, is the cause of many victims in every earthquake disaster. Therefore, directing of this science documentary film "Living In The Ring of Fire", is expected to be an effort to reduce the risk of disasters by knowing the existence of active faults around us, in order to be ready when any disasters come.

Keywords: Earthquake Mitigation, Science Documentary, Lembang Fault.
