

ABSTRACT

Bandung is one of the biggest city in Indonesia. This is proven by the numbers of Bandung citizen that keeps growing over the years. As the population grows, the diversity of interest also grows. Unfortunately, there is no space to serve these activities and interests. A space where people could gather and share their interest with other people who has the common interest as them. An Urban Community Hub is the answer to all these problems. The design of Urban Community Hub would be the center of education, recreation and social for Bandung citizen. The design approach the building would use is spatial organization based on users activities. The concept that would be applicated here is 'Comfort in Communicating'. Hopefully with the applicated concepts, the effectivity of users activities could be reached.

Keyword: *Community Hub, citizen, community, urban.*
