The purpose of this study is to change the habits of the measles community who burn their rubbish so that they no longer burn rubbish for the sake of reducing / processing waste, especially plastic waste. Teach the public how to treat waste properly so that the environment becomes clean and the air is kept fresh. The population of this research is the entire community of Mount Puntang, especially the Campakamulya area. This research uses a case study method due to in-depth exploration related to waste management in the Mount Puntang area. So this method is directly related to the facts of the environment. The results obtained are non-scattered rubbish and clean and maintained air pollution because no rubbish is not burned anymore and can be used as a work or souvenir typical of Puntang Coffe.

Keywords: Waste Management, Processing Place, Plastic Waste, Industrial Oven.
