

ABSTRACT

Attractions in the city of Bandung has a myriad of potential that promises to increase the prosperity of the community around the city of Bandung. On the Bukit Moko tour provides beautiful scenery such as hills, forests and gardens. In addition to having beautiful views of Bukit Moko tourism, it also has obstacles in accessing the road to the summit which has steep and steep road conditions which can cause a strike on the vehicle. Departing from this phenomenon, the design of the Cable Car facility needs to be realized in Bukit Moko tourism. The Cable Car facility is expected to be able to help tourist activities. In this design the author will focus on the design of supporting cable car cabins, namely the interior design which has a purpose for beauty and comfort. With the science of product design the author is expected to be able to explain concepts that can be understood in order to make it possible to be the answer to the existing problems.
