

ABSTRACT

City parks are one of the important public facilities in a city. City parks have many benefits such as recreation, sports, greening, to filter air pollution. One of the parks in the city of Bandung is the City Hall Park. Inside the City Hall itself there are 3 parks namely Dewi Sartika Park, Labyrinth Park and Historical Park. Each park has its own characteristics and functions. At this time the authors chose a case study, namely Historical Park. As the name implies, Historical Park has a lot of information displayed in it. Like reliefs of folklore and biographies of figures who once led the city of Bandung. Although the Historical Park has been presented with information about the history of the city of Bandung, but the public is less interested in reading and understanding that information. Then came the idea for the design of this historical information system panel. The design of information systems about history for the Bandung Historical Park is based on the lack of public insight about the history of the establishment of the City of Bandung and the weakness of the attraction of visitors to read information about history that is already available in parks and other media. This historical information system product is designed to help make it easier to provide insight into the history of Bandung to the public. Knowing the history of Bandung for the community is important. Society can know the origin of all things and past events. By knowing history, people will have more cultural awareness, an increase in the spirit of nationalism and can provide education to their children and grandchildren so as not to forget the history of the founding of Bandung. The method used in this study is a qualitative method by collecting credible data through observation, literature data, documentation and interviews. The results of this design in the form of a mock up with an interesting visual so that it can increase the interest of visitors to learn history.
