

## **Abstract**

Many people when visiting a city, sometimes we are confused about where to visit in that city, besides that we also have to arrange the budget that will be spent to visit the detention. Therefore, the idea emerged to take advantage of technology as a means to provide solutions to tourists who want to visit a city by creating an Android-based application that will help tourists to manage their travel schedules in that city, where this application will schedule visits based on distance, closest and the location with the best rating from the user's location. Then the authors decided to provide a solution by creating a system that would manage and save time for tourists by using the system that the author has created.

**Keywords:** *Travel itinerary makers, Android apps, tours, information*
