ABSTRACT

The event is an activity carried out to educate. This activity is inseparable from the organizer of the event, the event organizer. Advances in information technology today are as meaningful to human life patterns as information systems are. The existence of processing data into computerized information is very important. One of the organizations that need this technology is the event organizers who are confused will discuss about where the event has been designed to make a face to support the event in managing buyer data, events and tickets. This application was built using the PHP programming language, with the Codeigniter framework and its database using MySQL. The application development method uses Waterfall success.

Keywords: Events, event organizers, tickets, organization
