

LIST OF FIGURES

2.1	The mechanical movement tool that is realized	5
2.2	The working of GPR	6
2.3	The Arduino Uno that used in the thesis	8
2.4	Working principle of stepper motor	11
2.5	The cross-section of variable reluctance motor	12
2.6	The cross-section of permanent magnet motor	13
2.7	The cross-section of hybrid stepper motor	13
2.8	The unipolar winding of stepper motor	14
2.9	The bipolar winding	15
2.10	The stepper motor that used in this thesis	16
2.11	The driver motor TB6600	17
2.12	The power supply that used in this thesis	17
3.1	The block diagram of research for this bachelor thesis	18
3.2	Mechanical design for this Bachelor Thesis	19
3.3	The block diagram of stepper motor system	19
3.4	The circuit of system	20
3.5	The electrical circuit of driver motor	21
4.1	The mechanical movement system	23
4.2	The expected structure of the system	23
4.3	The performance of tool when the tool move forward	24
4.4	The performance of tool when the tool move backward	24
4.5	The result calculation of tools performance when the tool move forward	25
4.6	The result calculation of tools performance when the tool move backward	25
