ABSTRACT

In Islam there is the science of faraid or the science of division of inheritance according to Islamic shari'ah which has been conveyed through the Qur'an, the sunnah of the Prophet. Inheritance rights are something left by the testator, in the form of assets (money) or others. So, in principle, everything left by a deceased person is declared a relic, including what is received in debt. One of the most disputed is the population of Indonesia, which is largely Muslim, is part of the distribution of inheritance. Much inheritance debate often triggers disputes that cause foul family relations. Therefore we built the android application of inheritance distribution and calculation for high school / vocational and equivalent students so that from an early age students understood that they would divide and calculate the inheritance distribution according to Islamic law. Android is a cellular-based technology that can be used on a variety of mobile devices. By using the development expected to help high school / vocational and equivalent students. The application that was built presents a Study feature to explain material about the distribution of inheritance, then there is a quiz feature so that high school / vocational and equivalent students can measure the level of understanding that will calculate and divide inheritance which has increased, and this latest feature Automatically without having to be manual.

Keywords: faraid(Inheritance), Android, mobile.
