GLOSSARY

Terms		Description	The First Page Was Used
KNN	:	K-nearest neighbors or KNN is an algorithm that functions to classify data based on learning data (train data sets) taken from the k closest neighbors (nearest neighbors), where k is the number of nearest neighbors.	3
CSV	:	A data format in the database in which each record is separated by a comma (,) or semicolon. Besides being simple, this format can be opened with various text-editors such as Notepad, Wordpad, or MS Excel.	19
API	:	Application Programming Interface is an interface that can connect one application with another application. Thus, the API acts as an intermediary between different applications, either within the same platform or across platforms.	19
