

Abstract

A school is a place where children can develop creativity by recognizing potential, shaping personality and behavior towards the fellow environment. Creativity is one of the important things in the learning system in schools. Many schools have problems motivating children's creativity due to the lack of media and supporting interior elements. For example, adequate props have not been maximized and the available physical space has not been optimal. Taruna Bakti Junior High School Bandung is one of the private schools that emphasizes child development through assimilation, recognizing children's potential, and increasing awareness of the surrounding environment. The cadets' learning method uses active learning methods for students who attend school. This learning method can trigger the creativity of students at Taruna Bakti Junior High School well but with less effective facilities and infrastructure. Through proper re design hoped that it can support learning and improve student achievement at Taruna Bakti Junior High School and can also support the performance of learning methods at Taruna Bakti Junior High School Bandung.
