

ABSTRACT

The land is a very important problem today, especially in major cities in Indonesia, but the growing population in Indonesia is increasing in number to be a problem, everyone needs a place to live, especially for people who already have a family, but because of the limitations of available land eventually began to appear buildings such as apartments as a solution as an alternative place to live other than home, the apartment itself has several types but for a small family-type two rooms become a common choice for the community, two-bedroom apartments are chosen because one room for parents and another room for children, one of the apartments that have a unit with two rooms is in The Suites Metro Bandung apartment located on Jl. Sukarno Hatta Bandung city, but the main problem in the apartment is the small area of the room, according to the data the ideal room size itself is 3,25 m x 4 m while the bedroom in the apartment room, especially the children's bedroom, will be below the standard size of the ideal bedroom room, this affects the child because the child's activities in the child's bedroom will be hampered due to the limitations of the room space in the children's bedroom, therefore it takes the design of a multifunctional bedroom set , minimalist and compact for children's bedrooms in The Suites Metro Bandung apartment.

Keywords: Apartment, Children's Bedroom, Space Limitations.
