

ABSTRACT

Land Rocker is a café that sell coffee. Land rocker is a small-scale trading company that not yet have a well-integrated system between purchases, procurement of goods, and sales. The process of recording is still manual which is done in a way that is verified on a piece of paper, and data result is inaccurate. Land Rocker has weaknes in reporting puchases, inventories, and sales which are still inaccurate, beside that Land Rocker also doesn't make a profit/loss report.

Companies like Land Rocker, which are still in the standard of small companies, would be had a good if the had a good system information so that the management of purchases, inventory and sale of goods in the company would be better. This information system is made based on web using the PHP programing language and MySQL database and the information system design process uses ER Diagram for business processes to be designed. An information system is provided for the Land Rocker café to make it easy for its employees to record purchases, inventory, and sales also report and make profit/loss reports.

It can be concluded that this project is able to assist the Land Rocker in dealing with problems of recording puchases, inventory, and sales, making reports on puchases, inventory, sales, and profit/loss. In addition to dealing with these problems if there is already an information system in Land rocker, it can help to develop the café for the better.

Key word: Purchase, Inventory, Sales
