

## ABSTRACT

*Cirebon City 400 library is the largest library in Cirebon City, Cirebon City 400 Library is included in the type of public library City / Regency which is intended for public, students, and children. The purpose of designing the 400 Cirebon City library is expected to provide facilities that are used as a forum for seeking information or scientific insights, and community creativity. There are 2 types of methods used, namely through primary data and secondary data. Primary data collection is done through interviews, observation, field studies, and documentation. and secondary data is data collected through literature studies such as books, journals, and articles that are relevant and in accordance with the design. data search media take advantage of the latest technology by distributing questionnaires via google form. The benefit of this research is to determine the reading atmosphere and facilities desired by library visitors. The 400 Cirebon City Library found shortcomings such as the use of space that has not been maximized, causing a lack of supporting spaces such as multimedia rooms, meeting rooms, special reading rooms for people with disabilities, relaxing reading rooms, special discussion rooms, and too many areas that have special functions. Then the space requirements are not optimal, such as less than optimal light conditioning, the spatial arrangement is still very monotonous, and all the collections are still manual in the form of physical books. With the results that have been designed, it is hoped that the 400 Cirebon City library can be an alternative solution to problems, especially in the city of Cirebon .*
