

## ABSTRACT

*Profit Growth is the change in the percentage increase in profit earned by the company. Good company profit growth will show that the company has good finances, which in turn will increase the value of the company. In addition, profit growth is a measure of the performance of a company, the higher the profit achieved by the company, the better the company's performance.*

*This study aims to determine the effect of Total Asset Turnover, Operating Profit Margin, Working Capital to Total Assets, and Debt to Asset Ratio on Profit Growth in agricultural sector companies listed on the Indonesia Stock Exchange in 2017-2020.*

*The sampling technique in this study used purposive sampling and obtained 10 (ten) companies in the agricultural sector with an observation period of 4 (four) years so that in this study 40 observation data were obtained. The method used in this research is panel data regression analysis using Eviews 10 software.*

*The results showed that Total Asset Turnover, Operating Profit Margin, Working Capital to Total Assets, and Debt to Asset Ratio had a simultaneous effect on Profit Growth. Partially Total Asset Turnover and Working Capital to Total Assets have a positive effect on Profit Growth, while Operating Profit Margin and Debt to Asset Ratio have no effect on Profit Growth.*

*Suggestions in this study as a reference for academics and further researchers to add insight as well as consideration for investors to be more careful in making investment decisions by looking at the company's profit growth. It is recommended for companies to have good Profit Growth conditions. One way is to increase the value of Total Asset Turnover and Working Capital to Total Asset.*

**Keywords:** *Debt to Asset Ratio, Operating Profit Margin, Profit Growth, Total Asset Turnover, Working Capital to Total Assets.*
