

ABSTRACT

Fabya Dhanaufaira, 1604180106, 2021/2022, Representation of Multiverse Using Animation in the art of *Probability of Parallel*, Thesis: Fine Arts Study Program, Faculty of Creative Industries, Telkom University.

Parallel worlds is a word that's aligned with reality. The parallel world theory allows every individual in our reality to have a 'twin' that has a completely different life in their world, the differences can occur to every individual that's faced with quantum junction, where an individual has to choose one of many options. Naturally, a 'twin' in question will live their lives with a different choices. A young adult will faced with situations where they have to make choices with risks and benefits exists in every options. The method of making the art carried out by the author is a 2D digital animations (moving pictures) and it will give a glimpse into an individual in our world that has two or more lives in the parallel world because they took a different choice. This work aims as a evaluation material, which is when an individual took a decisions, they have to think about every aspects thoroughly and firm with what they choose, especially young adults.

Keywords: 2D Animation, Multiverse, Digital Art
