Creating Photography Using Prisms in Refraction Of Me

TA: Fine Arts Study Program, Faculty of Creative Industries, Telkom University

The final project entitled "Creation of photography using prisms in the work Refraction of me" aims to explore the creation of photographic works using prisms. The background of the author taking this theme is the interest of photography results that are not commonly seen everyday and changes in human expression refracted by prisms. The method used by the author when making the work is experimental shooting using a prism as a camera filter. the results of the shooting show the split or refraction of light reflected in the prism.

The author's suggestion if you want to create a work using a prism is to use a tripod to be stable when shooting and sufficient lighting so that the desired results can be seen clearly. In addition, experiment a lot with prisms to get an idea of the desired results.
