

ABSTRACT

The spread of hoax or fake news has become one of the problems our society has to face in this time of crisis like pandemic. Hoax has become one of the main enemies to fight in this pandemic, the spread of hoax about Covid-19 often causes confusion among peoples on how to act and respond to the situation. There's still a lot of people with low interest in reading and it's not an exception for teenagers. Teenagers are supposed to be the ones who understand more about the situation and can tell the difference if it's a hoax or not. In this research, writers create comic strips especially for people to fight against hoaxes about Covid-19. The author uses qualitative methods as a method of data collection and SWOT analysis as a method of data analysis from data writers. The result of this research hopefully can help people to know more about Covid-19 and can tell the difference of hoax or not so later can also help reduce the numbers of positive cases and increase people's interest to get vaccinated.

Keywords: *Hoax, Covid-19, Vaccine, Teenager.*
