

ABSTRACT

The use of computers in modern times is very dominant in information processing, because with the processing of information using computers, it will be able to produce detailed, precise, and useful information for an institution or business entity. At times like this the buying and selling system can already use a software that is made to make the buying and selling process easy and accessible to the public without having to leave the house. In addition, this application helps to facilitate the process of buying and selling fishery products, especially in Muara Angke. These things must be considered carefully to make it easier for people to buy fishery products that are directly connected to the fishermen in Muara Angke itself. Avoid mistakes that result in disappointed customers who think the company is incompetent in the buying and selling process. To overcome the above problems, we need a buying and selling application that can be used to make it easier to do good buying and selling and can make good transactions too. The transactions used are through transfers and using e-wallet to make it easier for buyers to make transactions and reduce direct contact at times like this.
