

ABSTRAK

Laundry is a place of business that provides laundry services to each of its customers. Due to the large number of customers who use their services, laundry businesses have difficulty managing laundry data. Difficulties experienced in matters such as recording, managing laundry package prices, washing in laundry, washing out laundry, managing laundry financial expenses, managing laundry raw material needs, and managing laundry member records still use the manual method by handwriting into a book which creates several obstacles. such as writing that is difficult to read, or the book used to record it is lost, torn, or damaged. To overcome these problems, an application is needed to help the process of managing computerized data. Before making the application, what must be done is to conduct analysis and interviews regarding the needs needed in the laundry business, such as recording, managing laundry package prices, washing in laundry, laundry out of laundry, managing laundry financial expenses, managing laundry raw material needs, and managing member records. laundry. The application created serves to store all web-based laundry data. This application is built using the PHP programming language and uses MySQL for the database.
