The hospital is a place where people feel a sense of panic, so the atmosphere in the hospital should be more pleasant. The community paradigm towards hospitals that has a negative, scary atmosphere and makes visitors anxious still exists, so a paradigm shift is needed to create a pleasant hospital image and can support the healing process psychologically and physiologically. The aim of the design is that the people in Tasikmalaya City, especially those who come for treatment at TMC Tasikmalaya General Hospital, get good and comfortable hospital facilities and services. In addition, creating a pleasant atmosphere that calms psychologically. The design was carried out using direct observation methods, literature studies, documentation and interviews. TMC Tasikmalaya General Hospital was redesigned with a healing environment approach and the theme "Healing and Restorative Spcae" so that room users, both medical personnel and patients and visitors, can make the hospital a place that has a positive effect on the healing process and improving psychological health.

Keywords: Hospital, TMC Tasikmalaya Hospital, Healing Environment, psychology, biophilic.
