

LIST OF FIGURES

Figure 1.1 Frequency and cost of maintenance work curve	2
Figure 1.2 Comparison of OEE and uptime in maintenance types	3
Figure 1.3 Support vector machine classifier with linear kernel.....	8
Figure 1.4 Support vector machine classifier with rbf kernel.....	9
Figure 1.5. Comparison of gini and entropy interval value	9
Figure 1.6 Research methodology.....	11
Figure 2.1 Taxonomy of maintenance types.....	13
Figure 2.2 Railway point machine equipment that operated in PT KAI.....	14
Figure 2.3 Test-bench for RPM equipment that used in PT KAI (Persero)	15
Figure 2.4 Current Readings in Time-Domain.....	16
Figure 2.5 The LoLin NodeMCU ESP8266 Module.....	17
Figure 2.6 WCS1700 module and specifications.....	18
Figure 2.7 Function block of WCS1700 current sensor	19
Figure 2.8 Three steps scalable filtered feature extraction	20
Figure 2.9 Linear Support Vector Classification Algorithm.....	20
Figure 2.10 Random Forest Algorithm	21
Figure 2.11 Neural Network Model	22
Figure 3.1 PdM system model for RPM equipment	24
Figure 3.2 Flowchart of Research Scenario.....	26
Figure 3.3 Technical specifications of electric motor of NSE type RPM equipment	27
Figure 3.4 Drawing of current sensor implementation	28
Figure 3.5 Drawing of current sensor installation in RPM equipment	29
Figure 3.6 3041A Precision Multi Product Calibrator Transmille.....	30
Figure 3.7 The display of ArduSpreadsheet (Arduino IDE's plugin).....	30
Figure 3.8 Fishbone diagram of RPM equipment's failure	31
Figure 3.9 Component of RPM equipment	32
Figure 3.10 The clutch assembly condition of RPM equipment.....	32
Figure 3.11 The relay timer is set 3 s for limiting the RPM operation in test-bench	33
Figure 3.12 Machine learning modelling process	35
Figure 3.13 5-fold cross validation method	36
Figure 3.14 Machine learning modelling	39
Figure 3.15 Confusion matrix for multiclass ML model	40
Figure 3.16 Example of confusion matrix for binary classification and parameters	40
Figure 4.1 Current sensor configuration.....	41

Figure 4.2 Arduino script for initial current reading.....	42
Figure 4.3 The calibration setup for current sensor reading	43
Figure 4.4 Arduino script for calibrated sensor reading	45
Figure 4.5 Calibration#1 setup	46
Figure 4.6 Calibration#2 setup	46
Figure 4.7. Data collection setup in RPM test-bench	47
Figure 4.8 Arduino script for current sensor in data collection	48
Figure 4.9 Current data acquisition into csv files	49
Figure 4.10 The time-series current signal of RPM in 3 conditions	50
Figure 4.11 The average of current signal pattern in operated RPM	51
Figure 4.12 Current sensor reading and classification.	52
Figure 4.13. Python script for determining the number of neurons	57
Figure 4.14 The learning curve of batch size comparative in 100-features ANN modelling.	59
Figure 4.15 The learning curve of batch size comparative in 10-features ANN modelling... ..	60
Figure 4.16 Python script for monitoring the optimal number of epochs	62
Figure 4.17 The learning curve of ANN modelling in 100-features and 10-features dataset to determine the optimal number of epochs	63
Figure 4.18 Python script for SVM modelling and evaluation	65
Figure 4.19. The confusion matrix results of optimum SVM models.....	65
Figure 4.20 Python script for RF modelling and evaluation.....	66
Figure 4.21 The confusion matrix results of optimum RF models	67
Figure 4.22 Python script for ANN model's evaluation	68
Figure 4.23 The confusion matrix results of optimum ANN models.....	68
