

ABSTRACT

Formal and informal education in Indonesia has a crucial role in increasing and developing human potential as a whole in physical and spiritual terms. One form of religious education that plays an important role in building a generation of Muslims with noble morals is Islamic boarding schools. The existence of Islamic boarding schools plays a role in instilling Islamic values that are in accordance with the beliefs of understanding the Al-Qur'an and Hadith and are needed in the current era.

Tahfidzul Qur'an Ibadurrohman Islamic Boarding School is a modern Islamic educational institution in Tasikmalaya City. However, interior planning has not become a top priority, even though having interior planning in every room in the Islamic boarding school area can provide comfort, especially in interactive and collaborative teaching and learning activities in order to improve the quality of students, teachers, staff and the character of the space in the Islamic boarding school itself. . This is proven by the lack of a setting system related to space dimensions, density and room atmosphere. Plus the spatial layout is still less effective so that it is less than ideal in organizing the spatial characteristics.

Therefore, it is necessary to redesign the interior of the Tahfidzul Qur'an Islamic Boarding School in the city of Tasikmalaya with the application of Dynamic Modern to make the room more attractive and functional so that it can maximize activities and provide comfort for space users, especially in teaching and learning activities by providing solutions from existing space problems. The results of this research are interior design suggestions that can help optimize activities in the school environment, especially in learning activities.
